

## FLOW METER PIPE REACTOR

### Flow proportional inline dosing system

This clever, compact pipe reactor dosing system is designed to proportionally dose chemicals for flocculation and/or pH Control. The 2 pumps will accommodate high flow rate dosing and simultaneous chemical dosing and pH control. pH control is achieved by an integrated pH electrode auto monitoring the pH level and initiating dosing as required. 110V/16Amp power required.

Chemical Dosing & pH Control

Quick Release Couplings for easy setup

High flow rates – up to 100m<sup>3</sup>

Integrated Remote Monitoring

#### Additional services available:

- Advisory & investigatory visits
- Site installation & commissioning
- Site visits & sample analysis
- Consultation on solutions
- Telemetry
- Maintenance & servicing
- Calibration

Perfect for use in conjunction with Tanks WTS Water Treatment Systems and Storage Tanks.

## AVAILABLE FOR HIRE OR PURCHASE
